Zbeam[®] 'Hawk' – Line Array Aiming Bar

Never take down a line array for aiming adjustments again!

- 1.) Service eye to lift cluster into place.
- 2.) Dead hang eyes for permanent suspension.
- 3.) Location of pan axle, allows for 360° rotation under full load. Includes a friction bearing so that the cluster will not 'free spin'. The friction bearing works in a similar manner to your car sun visor. Push it, it turns. Let it go, it stays.
- 4.) Fixed slot, accepts 3/8" to 3/4" shackle.
- 5.) Slot on adjustable carriage, accepts 3/8" - 3/4" shackles. Adjust position to fit line array of the day.
- 6.) Adjustable position center carriage. Allows for tilt adjustment under full load, as accurate as 1/10°.
